10. All level and timer adjustments will be made by an Operator at the control panel through some type of HMI (Allen Bradley Panelview Plus/Panelview 800 (10")) touch screen on the front of the panel door.
11. The electrical drawings included will show the space needed for the new Variable Frequency Drives (VFD), Programmable Logic Controller (PLC) Compact Logix, and the 10" Panelview Plus 800 on the front of the panel door.
12. A PDF of the program has been included as reference 1. All logic, alarms, and HMI/SCADA information is included within the provided PLC program.
13. A PDF of the existing plans has been included as reference 2.
14. Pictures have been included as reference 3.
15. Bidders including common spare parts with their bid proposal shall provide a current price list and the discount off the price list offered to LHC, if any. If no price list discount is indicated, LHC will consider this to mean no discount is offered.
16. The following questions and answers were presented as Addendum No.1 in the initial bid.

Q: Section H-A.4: What determines the 48" downstream water level at 7 mgd?

A: The original flow calculations were submitted by Eimco Technologies. However, taking into consideration there is a 2.6' head wall at the end of the channel and the center overflow channel elevation is 904.30 (4.3' above the screen channel floor) it would be assumed approximately 4' would be to possibly not allow it to back feed into the overflow channel.

Q: Section H-A.6: Can the blinding factor for the new 2mm screens be reduced to the more common 50% instead of the specified 70%?

A: Yes, 50% blinding factor would be acceptable as long as the OEM spec. is met; "The loss of head at max. flow of wastewater, with a downstream water depth of 4', shall not exceed 11" of water with 50% blockage of the screen".

Q: Section H-A.9: Is the spray bar wash water filtered? If not, can it be filtered to minimize the cleaning frequency of the band screen filter system by plant personnel?

A: The wash water is plant water with an average turbidity of 0.10 and <3mg/L TSS from an MBR plant. If additional filtration is needed manufacturer shall provide.

Q: Section H-B.5: To insure everyone bids the required material of construction, would you please clarify if 316SS or 304SS construction materials are required?

A: H-B.5 states "316 or approved equal" 304 is not an approved equal and will not be allowed in this project.

Q: Section H-D.4: Is it the intent for bidders to reuse the existing Hydro Ranger level sensors, or can new level sensors be provided?

A: New transducers shall be provided and installed by Lake Havasu City.

Q: Drawings: What are the dimensions of the skylight openings in the ceiling?

A: 8' X 12'

Q: If the controls are to be added to the panel is it required for the panel to maintain the UL listing on the panel, any modifications to the panel will void the UL listing on the panel. If yes, the modifications will have to be made by a UL listed shop that will have to be onsite to make the changes. After the changes are made a UL inspector will have to come on site and recertify the panel. This could be very costly and also create other problems if fittings for conduit do not meet the Nama rating on the panel. This is probably my biggest concern.

A: Use components and build to U.L. 508 Standards. Having the panel listed after the modification is not required.

Q: How will the new screens be controlled, will the existing PLC control the screens or will we need to provide a new PLC to interface the old one and control our equipment. If the current PLC is to control our equipment some code modification may need to be made. Who is responsible for these?

A: Ovivo is responsible for modifying. New PLC shall control the system and the old PLC shall be turned over to the City of Lake Havasu. New PLC shall be Allen Bradley Compact Logix 1769- L33ER and associated I/O.

Q: Looking at the space in the panel I am concerned the new controls composites will not fit into the existing panel.

A: Provide Complete and Operating system. If this means additional enclosure or new larger one, then provide.

Q: The spec states that we are to provide an HMI on the front panel. Current panel has an HMI on it, will this be replaced and will Ovivo be responsible for the programming of the new one. The PLC in the panel has one Ethernet port on it but it looks like the cable is just going out to the plant. To communicate to the HMI a new network switch would need to be provided and the PLC program would need to be changed to interface the HMI. Is Ovivo responsible for this.

A: Ovivo is responsible for a complete and operating system. The City of Lake Havasu SCADA department will work with Ovivo to integrate with the Plant SCADA System.

Q: Looking to the front of the panel I don't feel there is enough room for the added panel view.

A: A smaller screen will be acceptable.
